Metes and Bounds is a free tool for creating and manipulating plot maps. The app has a simple interface that includes a bunch of tools and focuses on the current drawing. The aforementioned Drawing Wizard asks you several questions about the type of plan you want to create and based on the provided answers, the wizard presets some of the values to help accomplish your goals. Unlike other apps that use similar wizards, this one doesn't lock you into a certain workflow, but gives you access to all the tools and lets you change any of the options in order to better suit your needs. Some items can be added to the plans, such as pictures, labels and text, as well as a title block. Lines, curves and corners may be added to the drawing by specifying the exact position, orientation and distance from another point. The program can work with multiple layers in the same drawing, providing options for using a scaled background image, such as a section or topographical map. The bottom line is that Metes and Bounds is a nice tool that can come in handy if you often work with land plots.
